FEDE

New SoHo collection

SoHo is the new light switch collection from **FEDE+.**
Trendy and eclectic!
The **SoHo** range offers a modern design available in our stunning brushed finishes. You can select the brushed finish in **brass, copper, graphite or nickel.**
Our craftsmen with their years of experience, artistic eye and incredible skills have created these **very original brushed finishes.**
The timeless beauty and ability to be perfectly matched with any colour scheme means the new **SoHo** switch collection is a **"must have" for your next interior design project.**

The importance of the material and the finish

At **FEDE**, we love brass. A noble metal which allows us to fashion the most sensational and sophisticated designs and finishes.

We are constantly developing new techniques that we apply to the production process, the polishing and the electrolytic bath to give a perfect finish.

Shinny is out. The new trend is matt and we are paving the way.

"Brass is the new Black &
the ultimate sophistication"

Minimalism

Minimalism is expressed in terms of pure straight lines. Less is more...

The simplicity takes on a new complex and sophisticated dimension in minimalist spaces.

What is essential is the simplicity itself. We eliminate all that is superfluous and we focus on the object: the essential element of a switch frame is its square form and the material from which it is made.

SoHo is our minimalist collection designed for projects that require the authenticity of brass and a switch design in its purest form; flat, straight and square.

SoHo

SoHo
collection

Design

SoHo is our new emblematic collection representing our firm and laying the foundation for the new trend in switch design.

For the last **10 years** we have developed a wide range of classical decorative switches and now it's time to reinvent ourselves once again.

Classic designs are never out of fashion, but now we are launching our new contemporary lines such as the **SoHo**.

*ITEMS' REAL SIZE ARE SHOWN IN THE IMAGES

SLIM & CLASSY!

Real shape & All in metal!

What do you prefer for your project?

1- Press switch with key.

2- Turn the rotary switch.

3- Switch the toggle.

4- Turn the dimmer.

NEW TOGGLE SWITCHES WITH LED LIGHT

NEW!

State-of-the-art LED lights with a longer service life are used in our switches mechanisms.

The same type of mechanism is used for lighted and non-lighted switches.

LED lights are installed in the switch mechanism by applying slight pressure, connecting automatically.

If necessary, you can change your common switch into a lighted switch. To do this, simply install the LED light and replace the opaque key with the diffuser key.

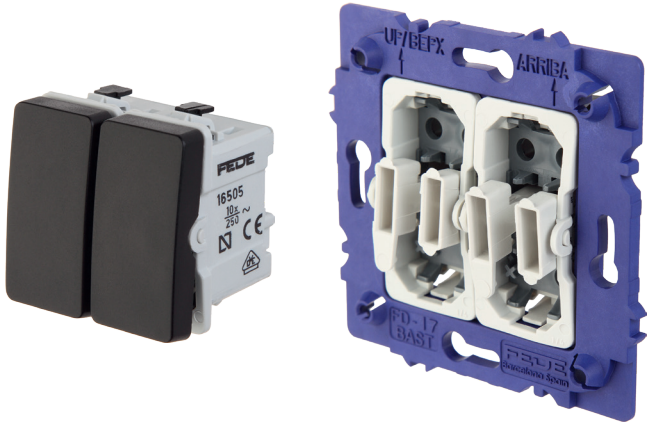
Switch mechanisms are available in two options: 10 and 16 A.

SoHo
collection

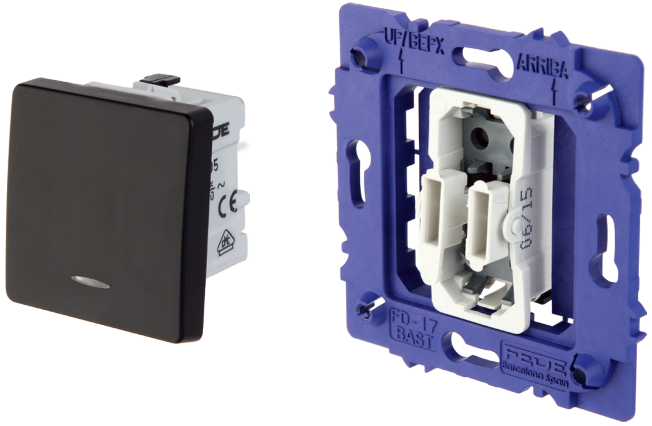
MAXIMUM FLEXIBILITY

The same switch mechanisms are used in both toggle switches and switches with keys. Thanks to our system's versatility, you can always easily change the design of already installed switches without performing complicated electrical work for their assembly.

For two-key switches, both mechanisms are installed in the fixing support. Different types of switch mechanisms can be combined, such as a simple switch and a two-way switch.



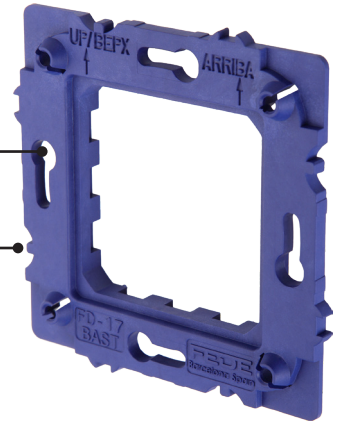
For single key switches, the mechanism is installed in the central part of the fixing support.



SoHo collection

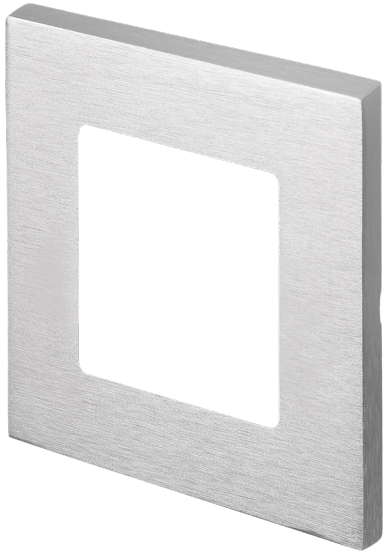
MODULAR SYSTEM

The modular structure of the SoHo collection guarantees a maximum flexibility when being installed. Our wide range of electronic mechanisms allows for an optimal technical solution.



The holes allow for the mounting supports (brackets) to be aligned.

The notches on the edges allow the mounting supports (brackets) to be easily connected.



Most items, with the exception of complex electronic devices, are supplied disassembled without keys or front plates, i. e., any decisions regarding appearance can be taken during the project's final stage.

All system elements are connected through a clip system to ensure easy installation.

SoHo
collection

A MODULAR & UNIVERSAL system

In the **SoHo collection**, we offer a wide range of decorative frames with the possibility to install up to five mechanisms. Our decorative frames are universal and may be installed in both horizontal and vertical positions.

Switch with Brass Keys

For those who appreciate the real touch of metal, we have designed keys in real brass with a high-quality electroplated surface.

The combination of the shine of the brass surface and the matte finish of the decorative frames results in true elegance and sophistication.

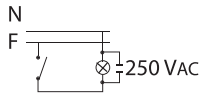
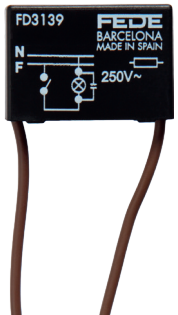
ADDITIONAL RESISTANCE / RÉSISTANCE SUPPLÉMENTAIRE / RESISTENCIA ADICIONAL/ДОПОЛНИТЕЛЬНЫЙ РЕЗИСТОР

FD3139
Tensión: Máx. 250V
500 NF
Resistencia: 1MΩ





When using a switch with LED, the additional resistance stops LED lights from flickering when switched off, while saving energy. The additional resistance installed eliminates the capacitator's leakage currents that cause lights to flicker when the power is switched off.

Permite eliminar el parpadeo de las lámparas LED con un ahorro de energía en estado apagado, al utilizar un interruptor con iluminación. La resistencia adicional instalada en la cadena elimina las corrientes de fuga que cargan el condensador y llevan al parpadeo de las lámparas después de apagar la alimentación eléctrica.

Permet d´eliminer le clignotement des lampes LED pour une économie d´energie. En mise sous tension, lous de l´utilisation d´un interrupteur d´eclaviage. La ressistance supplimentaire installé dans la chaîne élimine les courants de fuite que produit le condensateur et qui conduit au clignotement des lampes une fois la mise hors tension de l´alimentation électrique.

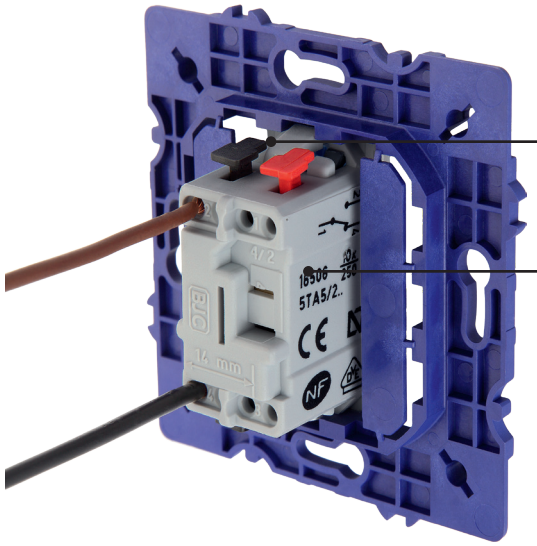
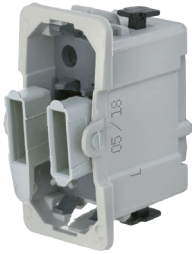
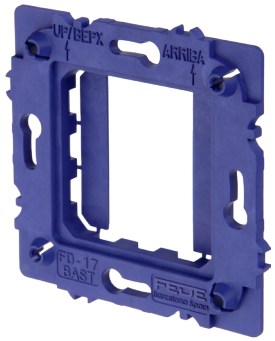
UNIVERSAL SWITCHES



Switches are equipped with screwless terminals for easy connection.

Our easy-to-read descriptions and connection diagrams are found in the switch housings.





The LED light can be installed in the mechanism with a simple click.

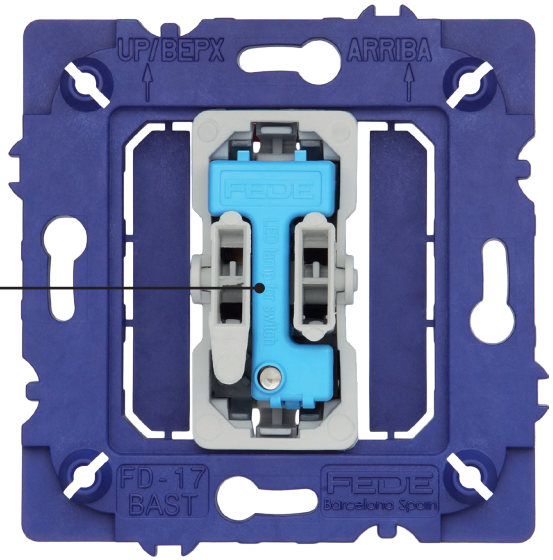
The same type of mechanism is used for lighted and non-lighted switches.

LED lights are installed in the switch mechanism by applying slight pressure, connecting automatically.

If necessary, you can change your common switch into a lighted switch. To do this, simply install the LED light and replace the opaque key with the diffuser key.

Switch mechanisms are available in two options: 10 and 16 A.

10A & 16A

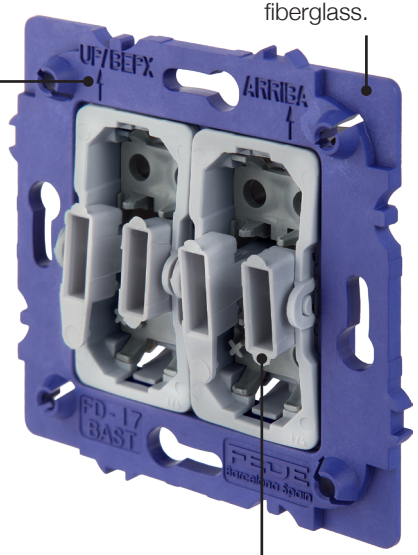


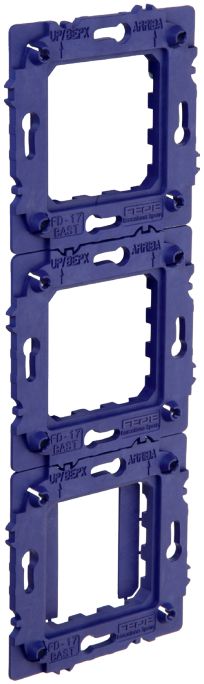
State-of-the-art LED lights with a longer service life are used in our switches mechanisms.

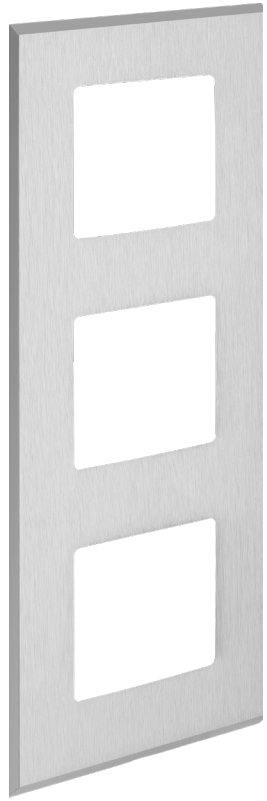
TOTAL SAFETY

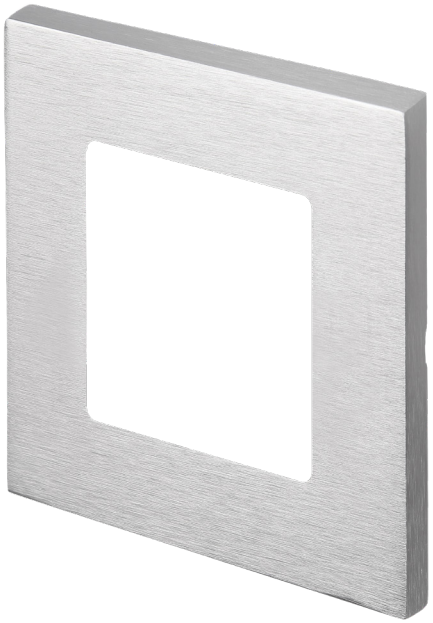
High quality polyamide mounting support with fiberglass.

Arrows with the corresponding inscriptions for the correct positioning of the mounting support (bracket).









All anti-static parts of the mechanism are well protected.

The plastic covered metal keys provide excellent insulation of the surface when connecting the switch mechanism, offering maximum safety.

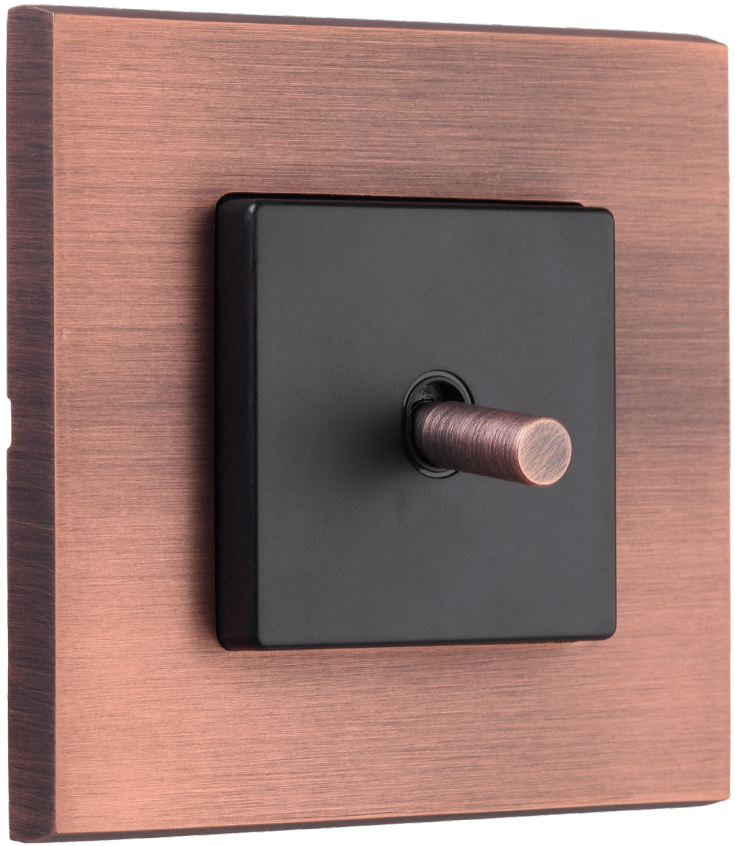
New LED Toggle Switch

And finally, we present the latest trend that is to turn on a light with a switch that incorporates a transparent toggle illuminated by LED.

How do we do it? Using the same standard switch mechanism. In this way, there is no need to make any additional changes to your project.

It's just great! A detail that does not go unnoticed.



Toggle Switch

All retro style fans, love toggle switches.

Our new toggle switches incorporate an innovative design and the latest technology to become objects of desire.

We have created the "it-switch". This invention of our **FEDE+** designers is incredibly MODERN & SOPHISTICATED!

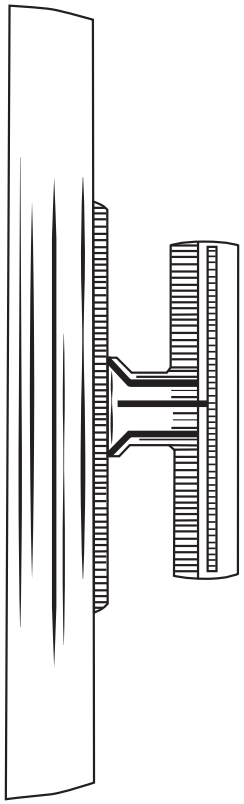
SoHo collection



Rotary Switch

Rotary switches are a true embellishment from the collection, combining high switching capacity with a compact size.

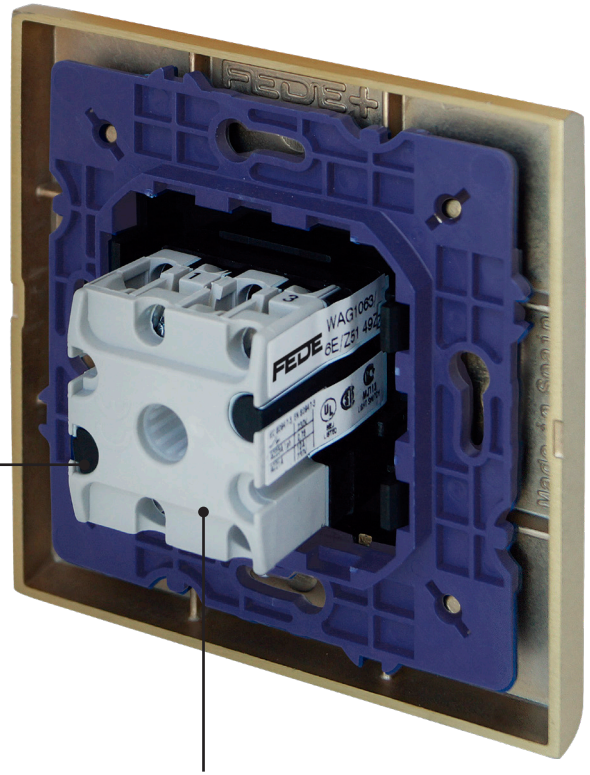
The wide range of mechanisms with different connection schemes gives you the possibility to develop any kind of electrical project.

ROTARY SWITCH

The handles are made of high quality cast brass.

Central embellishment in two varieties: metal or plastic.

Switches with auxiliary lighting are equipped with state-of-the-art LED lights.



Our mechanisms occupy as little space as possible in the installation boxes. That way we can free up space for connections and facilitate installation. FEDE+ rotary switches are the most compact and powerful in the market.

10A & 25A

The compact size does not affect power, as FEDE + switches have very high switching capacity, with two switch options for 10A and 25A.

INFRARED LIGHT SWITCH

Replacing a regular wall switch, this unit automatically turns lights on when someone enters in a room. It increases energy savings by automatically turning lights off after only momentary occupancy. An integrated Light-Dependent-Resistor prevents lights from turning on when the room has adequate natural light. The combination of PIR and light-level detection technology provide excellent lighting control reliability. The slide-selector provided for conveniently switching light on/off manually or to enable PIR/CDS to operate automatically.

MULTIPLE FUNCTION CONTROLLER

This controller integrates multiple functions in one unit. It is designed as a replacement for the bathroom fan and light switch, and uses a microprocessor to control the fan delay-off operation. The Delay Timer function allows the fan to continue operating to complete the ventilation of the bathroom after use.

SoHo collection

FD-LD100, FD-LD220 and FD-LD440
Universal push dimmers FD-LD100, FD-LD220 and FD-LD440

Universal LED-dimmers for wallbox installation that starts at 1W
A common problem - when dimming LED lamps and CFL lamps - is that conventional dimmers usually require a high minimum load of 50W, 35W or 20W, while low energy light lamps and LED lamps have a power range from 1W up to 20W. For dimming of these low energy lamps dimmers that can operate from 1W and up are required. The series of universal push dimmers starts already at 1W for dimming of both lowpower lamps as well as electronic transformers, dimmable LED-drivers and incandescent lamps.

Adjustable minimum dimming level
Depending on the type of load that is connected to the dimmer, the dimmer's lowest dimming level can be adjusted to fit the load in question. The dimming characteristic is distinguished between different types of loads. This feature is perfect for use when there is mixed loads of different lamptypes including dimmable halogen and incandescent lights. It is also very handy if the user at some future date decides to switch from incandescent to 230 VAC dimmable LEDs. Then you need only adjust the lowest dimming level to the new load, instead of buying a new dimmer.

Memory function
Equipped with memory function that also remains after power failure.

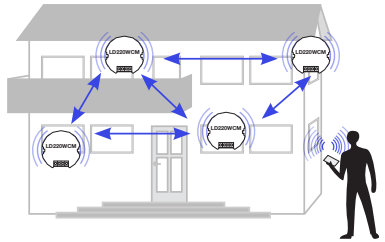
BLUETOOTH SYSTEM

PROFESSIONAL LIGHT CONTROL

Wireless control with CASAMBI

- Complete control system
- Wireless sync of all lighting
- With integrated control for 1 to 10V & DALI
- Presence senors, astro- and timer functions
- Easily controlled with app and/or button

Wireless control with CASAMBI



By using MESH network technology, you only need to be within reach (usually 30 metres) of just one unit in order to control all units.

The system is based on the standardised Bluetooth protocol, which is integrated in the majority of today's smart phones and tablets. With app support for Android and Apple iOS, you can easily control your lighting, with complete dimming options through your smart phone. The system enables you to, for instance, control all light sources, downlights, LED strings, wall sockets, garage doors, Venetian blinds and much more. You can of course also control the system with a classic non-locking button.

THE APP

Dimming using the app

You get simple, intuitive dim ring and light / extinguish function through the free Casambi app.

Astro-feature and timer control

The astro-feature means that your lighting is activated by the sunrise and sunset. The astro-feature and timer controls are set through the app. The settings are thereafter stored in the dimmer memory, and work on the basis of the dimmer's internal clock, and function completely independently.

Grouping and scenarios

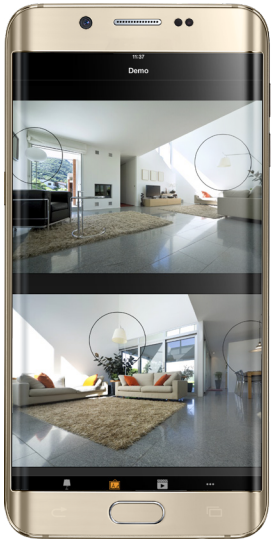
Group your light sources through the app and dim/control them simultaneously. You can of course also set different scenarios in separate rooms. For instance, if you wish to turn off all the light sources, or dim only a certain set of light sources in a particular room. Everything is possible with the dimmer and the app. Only your imagination is the limit!

Control options

The app allows you to take pictures of your rooms, and then activate the light by placing your finger on a lamp. Unbelievably simple!

Access and sharing settings

The first time your units are used, they are paired with a master unit (smart phone or tablet). The network or unit can thereafter be shared with other units. You can easily password-protect your network or leave it open for access. The internal communication between the dimmers is well protected through asymmetric keys or an encrypted schedule. You can also share the settings with your loved ones within the household in order for them to gain complete access to all the light control options. Simple and user-friendly.



BLUETOOTH SYSTEM

Unlimited reach

By using MESH network technology, you only need to be within reach (usually 30 meters) of just one unit in order to control all of them. Communication takes place automatically between units within reach. The Bluetooth dimmer LD220WCM is placed in a box and provides a natural dispersion of the network in the course of the installation.

No router

The Bluetooth system does not require any external router, as all communication is saved in the Bluetooth cloud. This is cost effective, provides quick communication, and is very practical.

Constantly updated units

The software in your units can be easily updated by connecting to the network through your smart phone/tablet. This provides the units with the latest features and updates. The units update each other automatically when new firmware is uploaded.

Scalable system

The LD220WCM is included in the wireless system and can be integrated with products such as the SSW60WCM. Read more about each product on the next page.

Gateway feature

By enabling gateway functionality on an existing iOS or Android device, you will be able to access your home while at work, at the beach or if you just want to support an existing customer with his/her installation. You do not need to buy an additional router, rather it is sufficient to have one unit in place that runs iOS or Android, such as a tablet etc.

Download on the App Store

GET IT ON Google Play

System parts

LDD220WCM

Bluetooth dimmer

The LD220WC is a universal, back edge-controlled phase dimmer, which dims between 0 and 200 VA. The dimmer, like the other products, consists of an astro-timer as well as the option of connecting a non-locking press button. The dimmer is extremely small, which means that there is plenty of space inside the box. It is also possible to deactivate the dimmer feature in order to operate non-dimmable loads.

CM10WCM

The control device

The CM10WCM is a control device which converts the Bluetooth signal to between 0/1 and 10 V. This can be retro-fitted in the current system or, for instance, when you wish to install a more powerful dimmer in the system. In the DALI mode, there is support for, for instance broadcast, colour control and light temperature.

PWM4WCM

Control device for colour

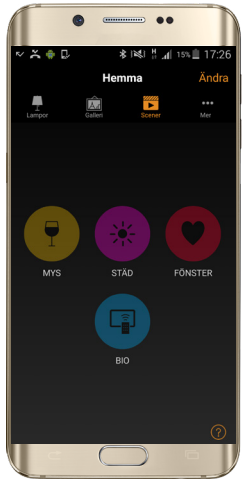
The PWM4WCM is a control device that controls the colour of the light fittings and LED strings that are intended for RGBW control. RGBW is used, among other places, at restaurants, churches, and play areas to set the correct mood and draw interest. PWM4WCM can handle 144W/24Vdc and 72W/12Vdc.

SSW60WCM

The digital actuator

Our Swedish-developed actuators now coexist with a unique product. With the SoftSwitcher SSW60WCM and, with its 32 three set settings for loads, it is possible to control/operate all the LED fittings and strings available in the market. SSW60WCM is a digital actuator that has enabled a compact design with its 60W.

Practical system solutions

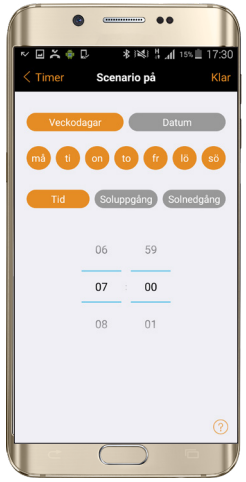


Living room

Downlights, LED strings and light sources are controlled by the Bluetooth actuator, and become part of the system. Connect the non-locking press button, and specify in the app the action that you want to perform

The app

Large windows with daylight in daytime, need a matching scenario.
The Astro-timer and schedule settings ensure that guests always enjoy the correct lighting.



Shops, restaurants, and public environments

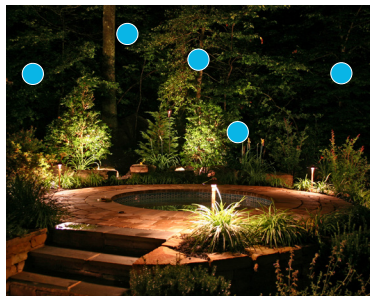
Control small and large lighting groups. The system is complete with dimmers from 0 to 2000 VA for LED lights. The installation is quick as unnecessary wiring and complicated programming are not required. The risk of unintended expenses also reduces. If you want to connect more lighting later, the integration will be quick and smooth.

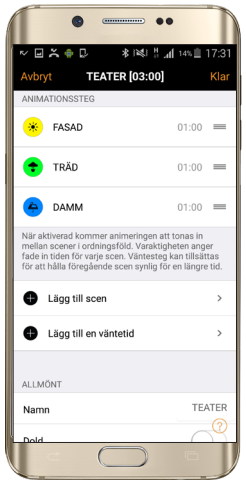
The app

Light fittings and light sources with scenarios and animations
get the customers and employees in the right mood. You create a vivid environment.

Outdoor lighting

Connect wall lights, bollards and deck lights to the Bluetooth system, and have the same control outdoors, as indoors. Wireless synchronisation simplifies wiring.





The app

The astro-timer, scenarios and animations impress the neighbours, and frighten off uninvited guests.

NEW CARD SWITCH

Our new hotel card mechanism offers a refined look thanks to it´s exclusive brass coating. Exquisite finishes for those lovers of unique details that benefit from the latest technology in LED signalling and a maximum to accept cards of different sizes, ranging from 0.7mm to 1.8mm. It supports all frames of the **FEDE** collections and is installed in a standard European box (60mm), just as the rest of mechanisms shown in this catalogue.

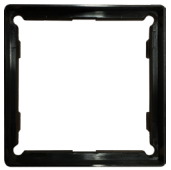
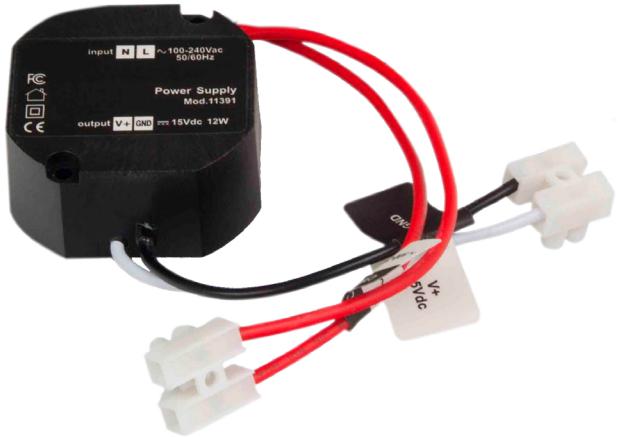
ADAPTOR



FD1234AD-M



Installed decorative frame provides degree of protection IP21.

SoHo collection

In-Wall Bluetooth Audio receiver that can be paired with any device with Bluetooth® capabilities (A2DP / AVRCP).

Signal reach is 10/12 meters.
Designed to ensure security and avoid interferences from other users nearby, each Module has its own identification number.
Perfect for your home, ideal solution for hotel rooms, hospitals, schools and any public place… in the wall avoids theft.
The In-Wall Bluetooth kit, includes:

- In-Wall Bluetooth Audio Receiver
- Two 2 ½" 8Ω loudspeakers
- Power supply (15Vdc/0,8A)
- Adaptor FD1234AD-M for installation with FEDE decorative frames

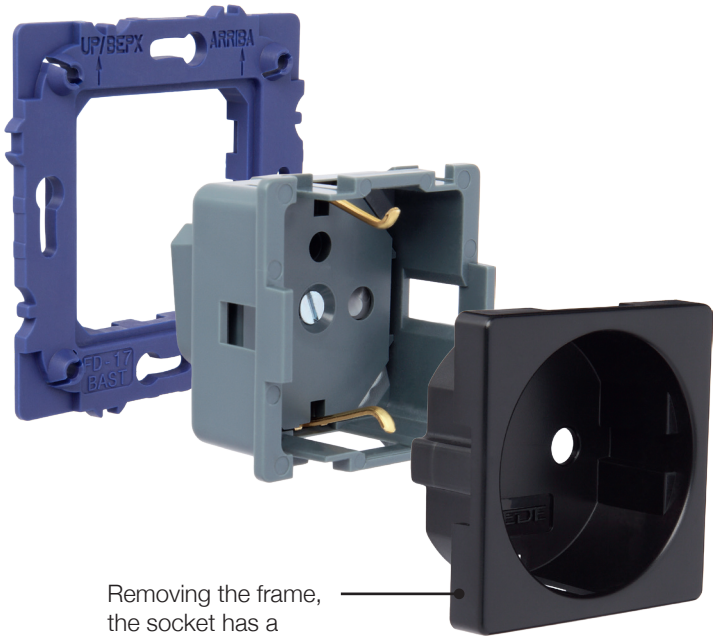
Instalation
Two 4Ω speakers can be connected, up to four 8Ω speakers and up to eight 16Ω speakers.
Maximum power 5 + 5W.

Features
Each module is identified as KINGBT-XXXX where XXXX is a serial number which permits the user to identify different Modules that can co-exist in the same installation.

The module is provided with a key for operating the Bluetooth® mode (ON/OFF).

External audio input: the module is also provided with a socket to connect a 3,5mm jack for an external audio input. When the user inserts the jack the audio output switches to the signal from the jack and has priority over the Bluetooth® signal.

GERMAN SOCKET



Removing the frame, the socket has a protection degree of IP21.

FD090F

Aluminum alloy support
for fixing connectors

FD091F

F-F connector

FD092F

F-IEC-pin connector

The FD090F support is made of an aluminum alloy with a high shielding ability and, depending on your needs, allows mounting one or two FD091F or FD092F connectors. This kit is installed in the circuit boards. Despite the fact that ecoCOMPACT is the most economical solution, it has a very wide operating range from 4 to 235 MHz and provides compatibility with analog and digital TV / SAT signals.

Защитная крышка для суппорта
Tapa de protección para bastidor.

Protection cover, can be used for protect the installation support against the paint and construction dust, during construction works. Allows you control the connected switches mechanisms. Suitable for multiple use.
Защитная крышка, используется для защиты суппорта от попадания краски и строительной пыли, во время отделочных работ.
Позволяет управлять подключенными механизмами выключателей.
Пригодна для многократного использования.
Tapa de protection, utiliza para proteger el bastidor contra pintura y polvo de construcción, durante el trabajo de acabado.
Permite controlar los mecanismos de interruptores cuando circuito conectado.
Adecuado para uso repetido.

DESIGNATION OF COLORS IN CODES

FDXXXXX
Non-lettered codes are used for white items.

FDXXXXXAA
The letters at the end of the codes indicate the color of the item.

FDXXXXXAA-B
The letters after the dash indicate the color of the plastic base in articles with brass covers.

Color designations:
A — BEIGE
M — BLACK
BN — BRUSHED Nickel
BG — BRUSHED Graphite
BB — BRUSHED Brass
BC — BRUSHED Copper

Example:
FD04335BB-A — Socket cover

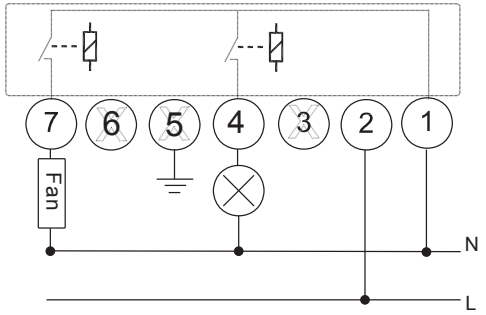
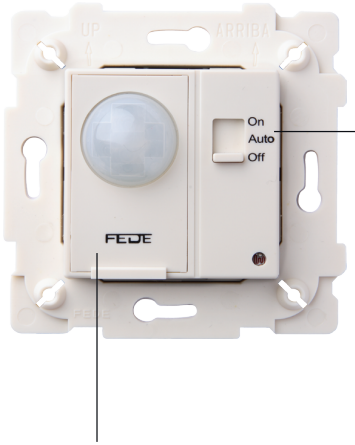
Bathroom light switch
FD28603

Includes both lighting and ventilation. When leaving the room, depending on the option of using the bathroom, the user presses the key with the corresponding symbol and the lighting goes out, while the ventilation continues to operate for a predetermined time. There is also the possibility to turn the fan on / off manually. The current setting and the operating mode are displayed on the LCD.



Infrared light switch
FD28604



The presence detector switch allows devices to be activated automatically when a person is approaching (for example, lighting). To optimize the characteristics you can adjust the level of illumination, with which the device will be activated, as well as the duration of its operation. In addition, on the front of the device is a switch, which allows to force its activation or deactivation manually.

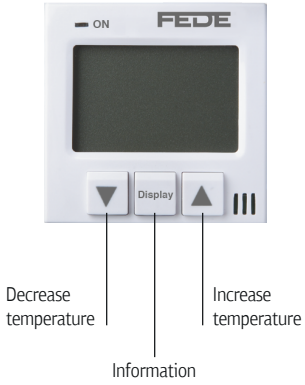
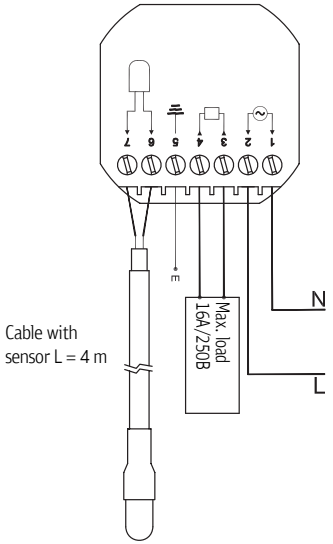
THERMOSTAT CONNECTION DIAGRAMS

Thermostats FD18000/FD18001

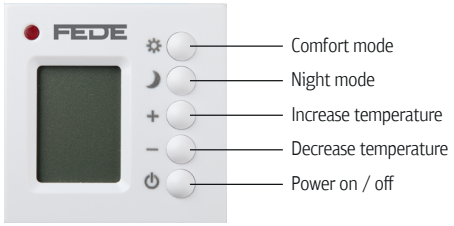


This thermostat provides simple and intuitive temperature management, whose current settings are displayed on a large LCD. Thanks to the built-in RGB, the thermostat display changes color according to the operating mode: when the heating mode is activated, the display will light blue. The set temperature and the actual temperature are shown alternately on the display; pressing the "DISPLAY" button will only display the actual temperature, and pressing the button again will re-activate the information collation mode.

There are two versions of thermostat available:
FD18000 — to control the floor temperature.
FD18001 — to control the room air temperature.

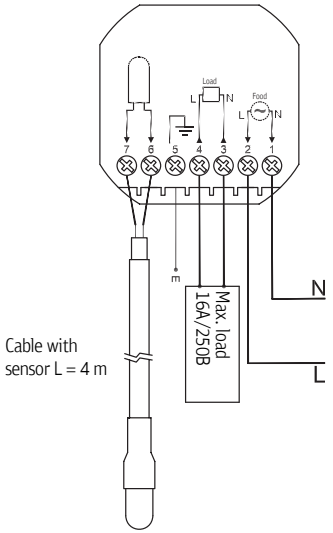


Multifunctional thermostat FD18004



This thermostat allows the previous programming of two modes of operation: economic and comfort. The modes are selected by clicking on corresponding buttons. The LCD displays the current thermostat setting.
This thermostat can operate in the following modes:

— floor temperature control.
— air temperature control.
(for example, when connecting electric radiators)
— combined mode



MECHANISM CONNECTION DIAGRAMS FOR POWER TV SOCKET OUTLETS

There are two types of television signal wiring for several users: the parallel circuit ("star" wiring) and the series circuit.

In the first case the dividers, also called separators, are used, which are responsible for equitably dividing the power of the input signal into 2, 3 and 4; although it should be noted that for each division in 2 the power of the signal for each output also decreases by half (actually even a little more: the signal drop is usually 3.5-4.5 dB) . This method of wiring provides a great uniformity of power in the television frequency band and a great insulation between the terminals, however, it requires more cables.

In the second case the couplers are used and the television channels are connected in series (cascade) one after another. This type of wiring offers unequal division of the signal. Such a wiring method provides uneven division of the signal, is easier to implement and requires fewer cables. However, when this scheme is implemented the signal reaches a lower number of TV receivers.
